ENVIRONMENTAL INITIATIVE

App for checking of GPRS Alarm unit

What is the initiative?

An application for Android or iPhone that is used to check on the status of the GPRS Alarm units, used to detect high levels and problems with flow on sewage over pumping setups

How was it identified?

- Identified by the alarm company as an easy tool to check on the status of the alarm units from a distance

Benefits and future plans

- The app Monitoring Station gives up to date information on the activations and restore of float switches, and / or flow switches.
- Allows authorised users to check on the units and see when the activation was, and at what time the restore comes through.
- Potential to wire the unit to a pump so the app can tell the pump to switch off
- Rolled out to all on-call supervisors so they can check alarm notifications.
